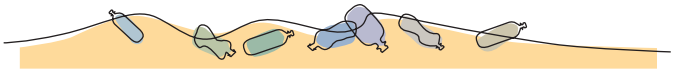
greenmark

Compostable food packaging

2020

Q: Does it really matter?

Plastic, once viewed as a miracle material, now poses one of the biggest environmental challenges of the 21st century. And here in Australia, the need for action couldn't be greater.

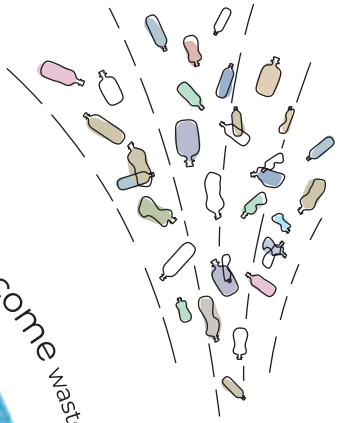


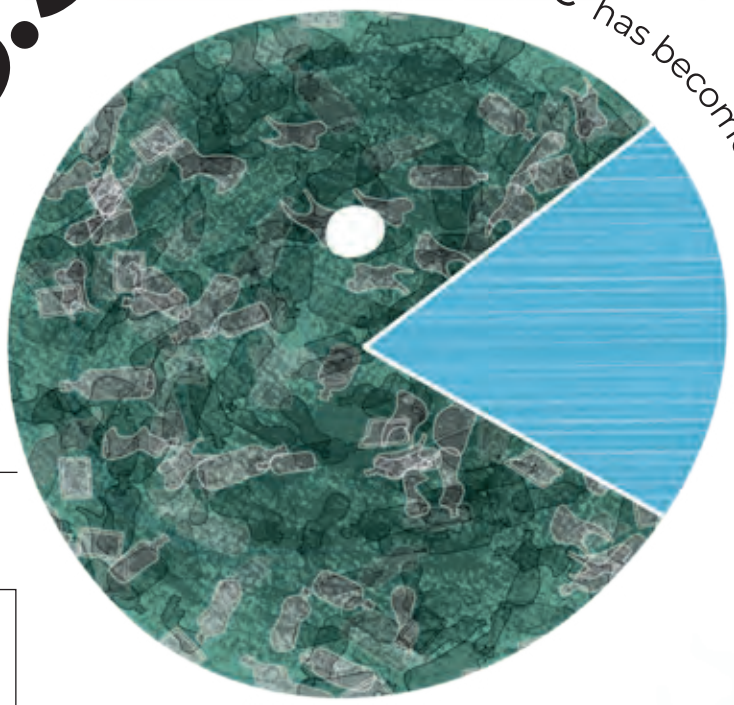
Recent changes in overseas regulation has left thousands of tonnes of plastic waste piling up on Australian shores with nowhere to go. Unsorted and often contaminated with food waste, this material has been deemed too dirty for other nations to process.

Since 1950's,

6.3 Billion tonnes

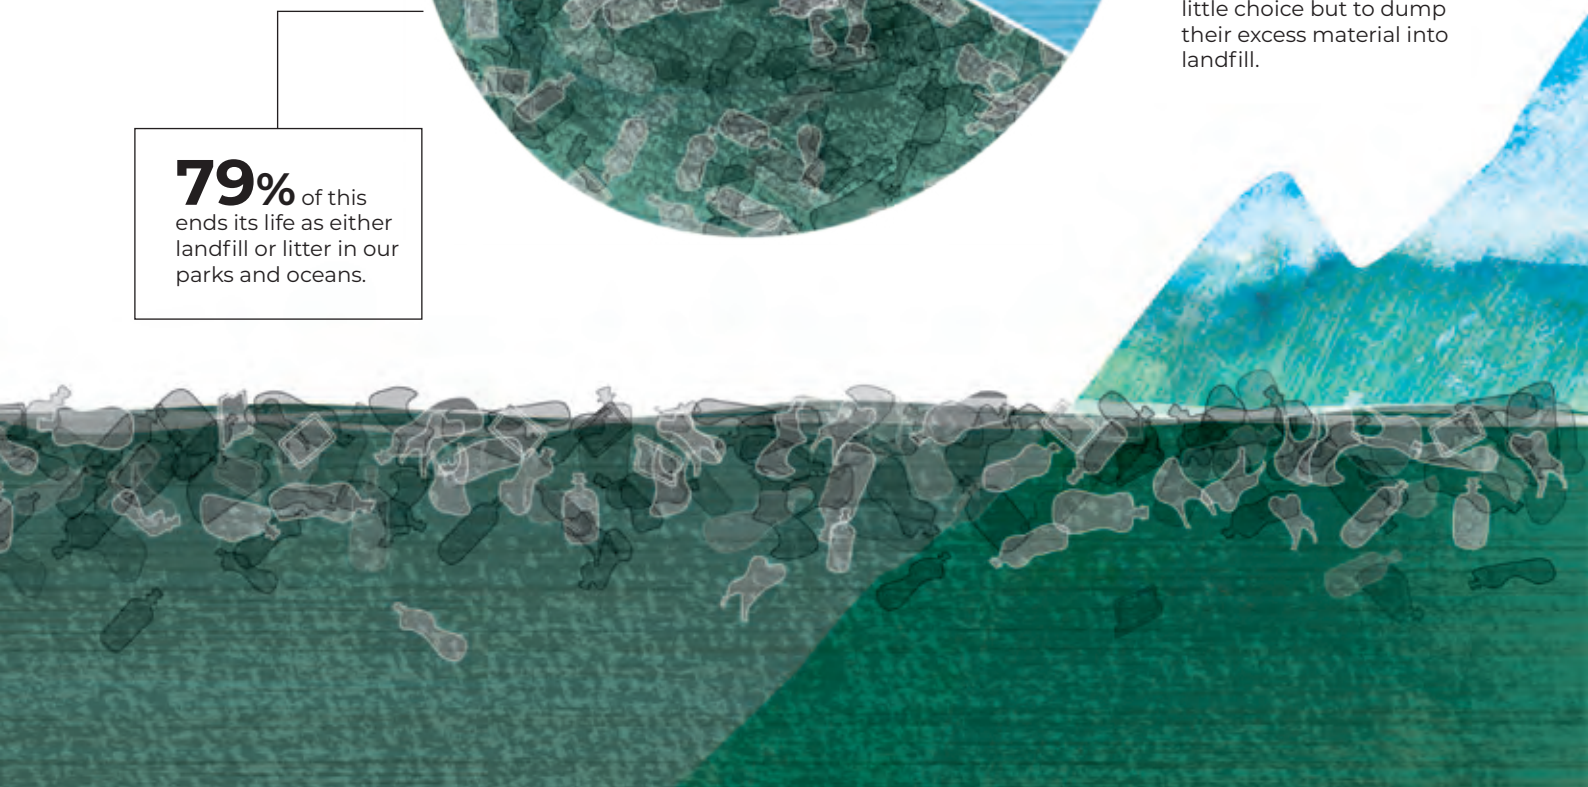
of plastic has become waste.

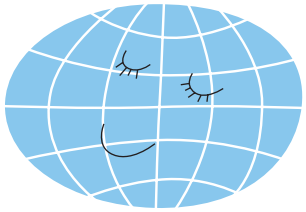




With inadequate infrastructure to deal with such a dramatic increase in material ourselves, many local councils and recyclers are left with little choice but to dump their excess material into landfill.

79% of this ends its life as either landfill or litter in our parks and oceans.

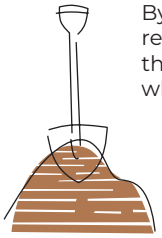




Australia is slowly waking up to the damage single-use plastics cause to the environment, and in particular marine life. As plastic bag ban moves across the nation, Australians are beginning to pay more attention to single use plastics in their everyday lives, and beginning to demand more from local businesses.

A: At Greenmark, we believe the future is compostable

That's why we provide the most extensive and price conscious compostable range in Australia. We're here to encourage every business, big and small, to adopt compostables and make a meaningful change to your environmental impact.



By embracing compostable solutions we can reduce the contamination of recyclables, reduce the amount of plastic entering the waste stream while also diverting organics from landfill.

Source sustainably, serve sustainably – from the food through to the packaging!

greenmark

Why use compostable disposables?

We can simplify waste collection – compostable packaging can be disposed of together with food waste, no sorting needed.

And no contamination for recyclable waste streams – the sad truth about paper or plastic recycling for food packaging is that once you put food on a plate it becomes dirty and cannot be recycled. Same rule for all your pretty acai bowls and chia smoothies, they all end up at the landfill – not so pretty, right?

But when food packaging is compostable and disposed together with food waste it can be processed and turned into compost. And used to grow more food.

Is it that simple?

Not really – there are a few challenges along the way ...

---

1 "Compostable" packaging is not all the same

There are different types of compostable products and they require different composting processes. Some are suitable for home composting and worm farms, while others require a special set of conditions available only at industrial composting facilities – we will explain the difference below (define the compostables)

---

2 There are no universal labelling system for compostable packaging

As it is a relatively new industry, there is a fair amount of confusing and even "greenwashing" information. It's hard to differentiate different types of packaging and answer the simple questions: is this box compostable? What grade of compostability does it have?

---

3 There is no universal system in place for waste disposal and collection

We all need to work together on these challenges to make the concept workable in practice!

Define the compostables

Greenmark products suitable for home/organics composting

(These products can also be processed at an industrial composting facility):

Wooden/Bamboo Servingware

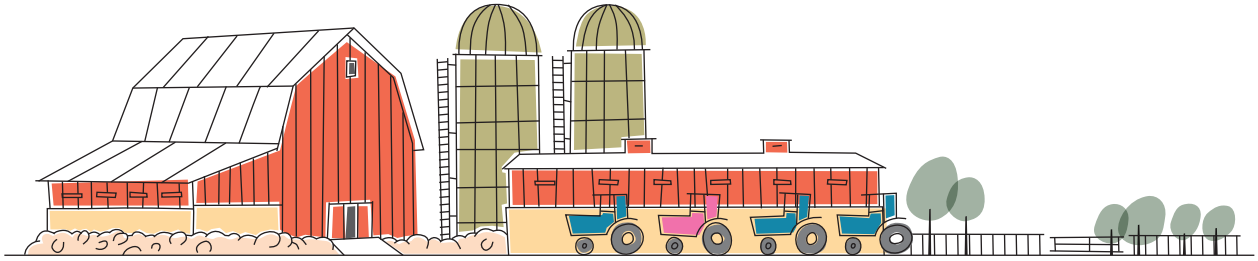
Napkins and
Greaseproof Paper

Products made from sugarcane bagasse or bamboo fibers: plates, trays, cups and clamshells

Wooden cutlery

Cardboard trays and boxes

Paper Bags

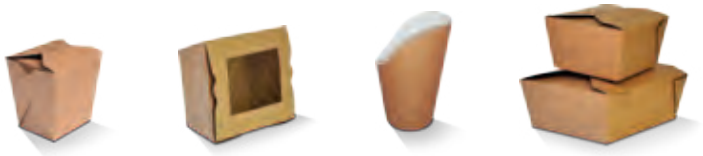


Greenmark products suitable for industrial composting only:

Paper cups with
PLA lining – Cup-To-Grow

PLA clear cups and deli containers

Food containers with
PLA lining – Box-To-Grow



PLA cutlery

PLA bioplastics are produced from PLA (poly-lactic-acid) harvested from corn starch, which is a natural, annually renewable resource. The production of PLA produces fewer greenhouse gas emissions compared to conventional plastic production. PLA products can be composted in commercial compost facilities.

While commercial composting is not widely available in Australia, statistics for home and community composting are encouraging, particularly in Victoria where 66% households use home composting. Furthermore, with the current government initiatives across Australia encouraging home composting and changing the situation with organic and food waste stream processing we are already beginning to see a positive change.

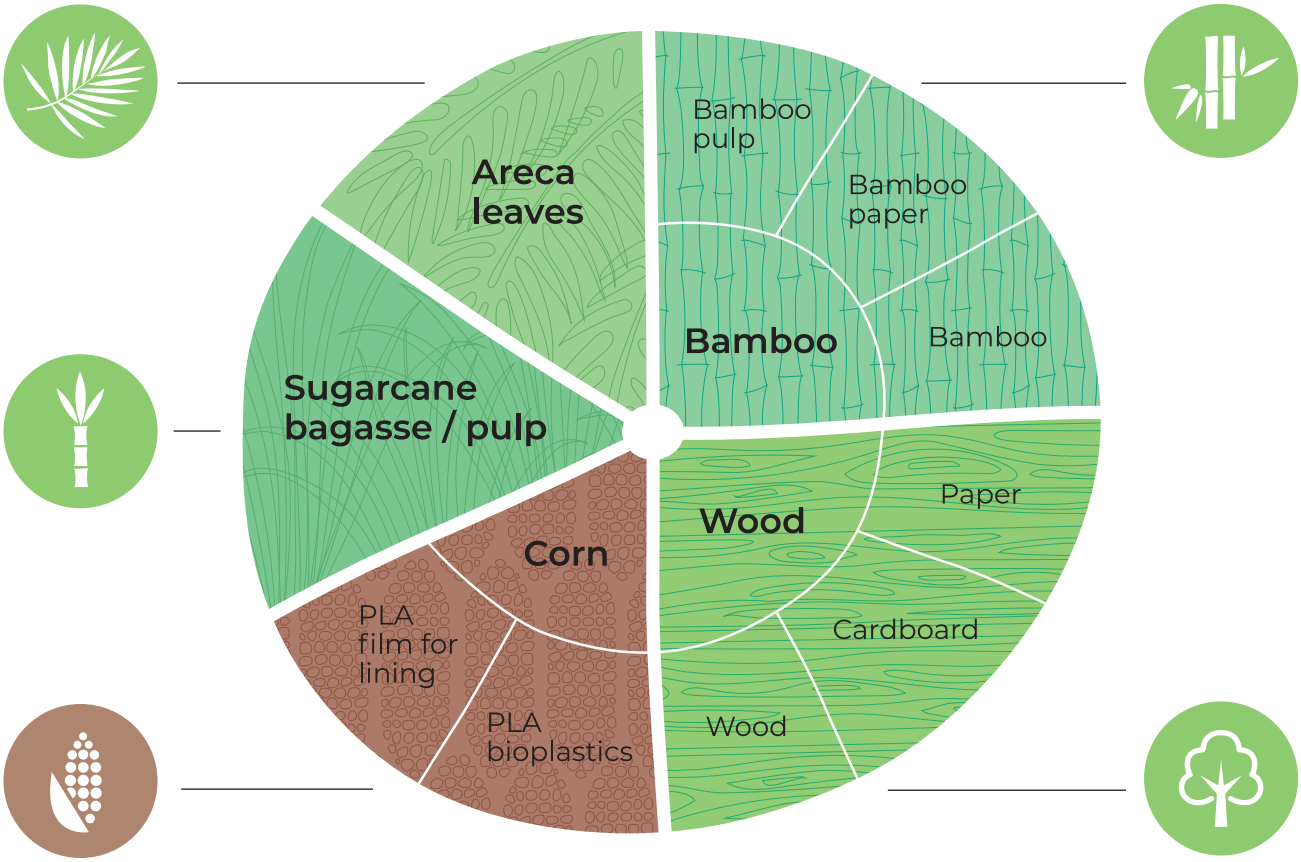
Compostable materials



Switching to Greenmark tableware reduces the use of non-renewable resources, and will enable a shift in the way waste is managed.

Know your options: we encourage you to embrace green packaging as a sustainable alternative to oil-based plastics in the food service sector. Switching to Greenmark tableware reduces the use of non-renewable resources, and will enable a shift in the way waste is managed. We provide school canteens, event organizers, universities, distributors, governmental agencies, not for profits, foodservice operators with the excellent biodegradable food service products at economically sensible prices – so don't hesitate to join the list!

But it's important to keep in mind that at first packaging should fit the purpose and help to prevent food waste, we will advise you to choose sustainable materials where possible without compromising functionality and branding.

HOME AND INDUSTRIAL COMPOSTING

Home and industrial composting

INDUSTRIAL COMPOSTING ONLY

Industrial composting only

Sugarcane bagasse / pulp

Sugarcane bagasse itself is a waste material, the dry fibrous residue left after sugarcane stalks have been crushed to extract the juice mainly for sugar manufacturing. When the fibers already crushed, less energy is required to make bagasse products compared with pulping wood for paper products.

Products made from sugarcane bagasse are strong and durable, natural fibre is very pleasant to touch and breathable. Leak and oil proof, with no lining required. Microwavable (warm up only). Refrigerator safe. ISO 9001 and ISO 14000 certified.

Compostable and recyclable (paper stream)

Our products are made to decompose in a commercial composting facility within 60-90 days. Suitable for home composting. Complies with ASTM D6868 and EN13432 reports for compostability.

Bamboo / Pulp / Paper

Fast growing bamboo regenerates quickly, making it a sustainable choice. Growing at a rate of up to 91 cm a day, Bamboo is one of the fastest growing plants on earth. Bamboo requires no irrigation and unlike trees it rarely needs replanting after it harvested, it grows rapidly and can be harvested in 3-5 years.

Wood / Paper / FSC Certified

The original raw material used for our wooden cutlery and paper cups manufacture is wood fibre, from sustainably managed forests, natural renewable resource.

Paper cups end of life options: our paper cups are lined with PLA lining and are compostable in industrial composting facility only.

Wooden cutlery end of life options: compostable

Cardboard / Recycled content

Cardboard is made from a renewable resource, compostable and easily recyclable, with less production emissions.

The original raw material used for carton manufacture is wood fibre. At the end of life, cartons are collected and recycled and form a secondary raw material.

End of life options

Folding cartons can easily be recycled by reprocessing in a mill, where the fibres are separated. The recovered fibre is then used to make cartonboard or another paper or board product. Alternatively, they can either be composted, a process also known as “organic recycling”, or if recycling is no longer a viable option, their energy content can be recovered in an energy-from-waste incinerator.

Areca palm leaves

Areca trees have large leaves, or fronds, which shed and fall to the ground every few weeks. The leaves are usually collected and burned. Our Palm Leaf range turns these leaves into disposable plates, bowls, platters – natural, compostable and biodegradable.

A strong, semi flexible yet not brittle, odourless, water and heat resistant leaf, this product has its own natural grains, characteristic texture and colour. Each one is unique.

The leaves are sorted, and then washed and heat pressed into a variety of shapes such as bowls, plates and platters (this also sterilizes the leaf) maximizing the use of this beautiful natural product.

No pulp, no starch, just a washed and pressed leaf. Totally natural.

End of life option

Use it again or you can compost it.

If you don’t compost at home but you’ve got a garden, you could just break the plates up and spread the pieces around your garden. They will break down, enriching the soil like any other leaf, within a couple of months

---

PLA Biobased Plastic

PLA biobased plastic is a bioplastic produced from corn. The production of PLA produces fewer greenhouse gas emissions, when compared to conventional plastic production.

Products made from PLA bioplastic are compostable in industrial composting facility only.

Please note, that clear cups and containers are heat sensitive and must be stored out of direct sun, away from any heat sources and kept below 35°C.

Custom
printed products

COFFEE CUPS

Choose coffee cup type, get creative with our unlimited options for colours and finishes and get your own branded cups.

Minimum order starts from just 50,000 units per size / design.

PRINTED CUP SLEEVES

Combine plain cups with stamp on (or printed) brown kraft cup sleeve. Minimum order for printed cup sleeves starts from 10,000. Custom print on brown and white kraft.

PLA CLEAR CUPS AND CONTAINERS

Minimum order starts from just 50,000 units per size / design.

LUNCH BOXES

Minimum order starts from 10,000 units per design

GREASEPROOF PAPER

Customize this versatile product to add extra dimension to your branded look, use it for food wrapping and tray lining

SLEEVES FOR CATERING TRAYS

Minimum order starts from just 1000 units per design

BUILD YOUR BRAND FURTHER

WITH MORE CUSTOM PRINTED PACKAGING OPTIONS

Add another dimension to the eco friendly packaging! Custom print packaging adds value and it creates a sleek, professional look which can frame cakes, bakes, takeaway meals and coffee, working for both boutique cafes and gourmet food makers.

Take your brand further with our custom print branded eco options – transform your everyday product packaging into moving billboards for your business and blend custom product design with cafe/ retail space interior to add integrity to your brand. Co-brand it with Greenmark to let your customers know you are choosing the sustainable option.

Please see a few examples of custom printed packaging – and we can customize almost any product from Greenmark range as well as design your very own food packaging.
